Yue Teng

Kirkland, WA · (631) 805-2516 · yue.teng@gmail.com · linkedin.com/in/yue-teng-molly

Available May – August 2027 · Graduating December 2027

Machine learning engineer with 3 years of industry experience owning production ML end to end at retail scale — feature engineering, modeling, batch prediction pipelines and model evaluation on PySpark and GCP — plus a PhD in quantitative methods. Currently pursuing an MS in Computer Science & Artificial Intelligence at Boston University. Seeking Summer 2027 machine learning engineering internships.

EDUCATION

Boston University — Boston, MA — Expected Dec 2027
MS, Computer Science & Artificial Intelligence

Fordham University — New York, NY — 2023
PhD, Psychometrics & Quantitative Psychology · Focus: causal inference and propensity score analysis

Chinese University of Hong Kong · MPhil, Psychology

Tsinghua University — Beijing, China · BA, English Linguistics & Literature

TECHNICAL SKILLS

Languages Python, SQL, R, Shell

ML & Modeling Gradient boosting, random forests, clustering, ranking & propensity models, PySpark MLlib, NLP / named entity recognition, deep learning architectures (CNNs, RNNs, LSTMs, Transformers)

Data & Infrastructure PySpark, Airflow, GCP, BigQuery, Looker, Flask, Git

Methods A/B testing & experimental design, causal inference, forecasting

PROFESSIONAL EXPERIENCE

Loblaw Digital — Toronto, Canada — 2019 – 2022
Data Scientist

- Owned **end-to-end batch prediction and model evaluation pipelines** on GCP from design through production, with Looker dashboards giving stakeholders ongoing visibility into model performance.
- Built a customer propensity model (gradient-boosted trees, PySpark) predicting conversion to online grocery, driving a **315% lift in marketing campaign conversion** and an **18x improvement in voucher-cost efficiency**.
- Built a **customer microsegmentation model** (bisecting k-means, PySpark) to profile grocery customers for personalized marketing, translating requirements from the customer acquisition team into model design.
- Diagnosed and eliminated the primary bottleneck in **Quickshop**, a customer-facing next-basket prediction service, rewriting its ETL layer to cut runtime from **8 hours to 2 (75% reduction)**; ran a production A/B test on the service by configuring traffic splits through its Seldon router.

PROJECTS

Skill Me — Insight Data Science Fellowship, Toronto — 2019

- Built a web application for personalized recommendation of educational resources using **NLP and named entity recognition**; delivered and demonstrated as a consulting engagement for FutureFit AI.

Deep Learning Specialization — DeepLearning.AI (Coursera) — 2023

- Completed coursework and programming assignments on CNNs, RNNs, LSTMs and Transformers, with applications to face recognition, speech recognition, machine translation and chatbots; covered regularization, batch normalization and weight initialization strategies.

TEACHING

Fordham University — New York, NY · Teaching Assistant / Instructor — 2015 – 2018

- Taught graduate lectures and labs in structural equation modeling and advanced statistical modeling using Mplus and R.
- Led undergraduate courses in statistics and research methods, including hands-on experimental design in psychology.
